BlackBeard <14506>

- BlackBeard matures in 100 days or about 2 days later than Zorro. **
- Approximate seed count for Blackbeard is 2,128 sds./lb.
- BlackBeard has shown some tolerance to some strains of Common Bacterial Blight (CBB) and some tolerance/avoidance to the affects of white mold.
- BlackBeard has demonstrated excellent canning color retention and above average quality in several cannery evaluated canning trials.

BlackBeard is a new black bean variety that initially has shown good adaptability ideally suited to the MINDAK production regions. A consistent performer throughout the trialing process and in commercial production, its upright architecture and excellent yield potential make it an excellent choice for MINDAK growers.

Assuming the 49 lbs./AC* yield increase over Zorro, profit would increase $14/AC on $30/cwt beans. This would amount to $1,400 increased profit over Zorro on 100 acres of production.
