SR Viper

- Excellent semi-upright architecture.
- Matures 95-99 days or about one day earlier than Merlot**
- Approximate seed count is 1,546 sds./lb.***
- Good seed color, appearance and shape.
- Preliminary testing has shown that Viper has resistance to bean common mosaic virus (BCMV).
- Resistant to Rust strains tested for at Colorado State University

Viper has shown broad adaptability in trials throughout the U.S. growing regions as well as the Manitoba and Ontario growing regions in Canada. Viper is indeterminate, semi-upright in it's architecture and provides great yield potential to the grower.

Preliminary yield data from the Great Lakes region shows Viper with a yield advantage of 495 lbs./AC over Merlot. Assuming a 495 lbs./AC yield increase over Merlot, profit would increase $198/AC on $40/cwt. Beans. This would amount to $19,800 for 100 AC of production.
