DRK 09434

DRK 09434 is a broadly adapted dark red kidney bean variety ideally suited to Nebraska and Minnesota production regions. 09434 has been a consistent performer throughout the trialing process, and has performed well in the NDSU, Nebraska dry bean trials; as well as private trials in Minnesota and Idaho.

Preliminary data shows 09434 with a yield advantage of 45 lbs./AC*. over Montcalm. Assuming a 45 lbs./AC yield increase over Montcalm, profit would increase $22/AC on $50/cwt. Beans. This would amount to $2,200 for 100 AC of production with the added maturity benefit of 3 day's.

DRK 09434 has also shown yield advantages over Red Hawk (252 lbs./AC advantage) over 11 yr./locations and Red Rover (279 lbs./AC advantage) as well over 10 yr./locations of data.

- Matures 93-97 days or about 3 day's earlier maturity than Montcalm**
- Approximate seed count is 1,008 sds./lb. vs Montcalm seed count of 937 sds./lb.***
- Good seed appearance and shape.
- 09434 has demonstrated average canning characteristics.
- Preliminary testing has shown that the 09434 has resistance to bean common mosaic virus (BCMV).
- 09434 in field evaluations have shown some tolerance to Common Bacterial Blight.
